Approval conformance test of transceiver C-One Agrident

According to your request of 26th June 2014 a conformance test was performed for the RFID-transceiver C-One Agrident delivered by your company. Conditions for the test procedure are laid down in ISO 24631-2 “Radiofrequency identification of animals – part 2: Evaluation of conformance of RFID transceivers with ISO 11784 and ISO 11785”. The test was performed at Innovative Modern Agriculture – (IMA) Wageningen B.V., The Netherlands, which is an ICAR approved test centre.

The intention of the test was to verify the compliance of the transceiver tested with the operating characteristics given in ISO 11784 and ISO 11785. The result is as follows:

The transceiver tested is operating in conformance with requirements as laid down in paragraph 7 of ISO 24631-2 and is fulfilling the operating characteristics of ISO 11784 and ISO 11785.

This statement is only valid for the stand alone use of the transceiver, with the correct software configuration installed and the correct setting of the reader parameters.

With this letter ICAR certifies the successful participation of the C-One Agrident to the test procedure and grants the approval reference number “**2014003**”.

Please note that the use of this certificate is committed to the “Conditions for the right to use an ICAR approval for ISO-Transceivers” as laid down in the Annex B of ISO 24631-2. If there are any further questions, please feel free to contact us.

Sincerely yours,

Elena Couto
ICAR Secretariat
